## Research Projects

### Reinforcement Learning for the Reach-Avoid Problem

PU, NJ, USA

Safe Robotics Lab (Prof. Jaime Fernández Fisac)

July 2020 - PRESENT

- Derive a time-discounted formulation of the reach-avoid optimal control problem that lends itself to (deep) reinforcement learning methods by inducing contraction mapping property.
- Apply a supervisory scheme by treating the approximate optimal policy as an untrusted oracle
- Deploy our reach-avoid Q-Learning in a range of nonlinear systems, including an attack-defense game

### Inverse System Design

PU, NJ, USA

Safe Robotics Lab (Prof. Jaime Fernández Fisac)

July 2020 - PRESENT

- Infer human's reference by only ranking feedback
- Select queries actively to speed up the convergence to the true preference

### ECG Real-Time Telemonitoring

NTU, Taiwan

Access IC Lab (Prof. An-Yeu (Andy) Wu, IEEE Fellow)

Aug. 2017 - Mar. 2019

- **Edge Classification:** Incorporate compressed sensing (CS), task-driven dictionary learning (predictive sparse coding) and PCA to render light-weighted classifier and overcome limited labeled data challenge
- **On-Demand Recovery:** Design a two-stage algorithm that classifies and reconstructs only problematic signals. This algorithm utilizes the information from classification stage to speed up the reconstruction algorithm
- **Hardware Design and Chip Implementation:** Propose a hardware architecture for on-demand recovery to allow hardware sharing between classification and reconstruction algorithms

### Direction-of-Arrival (DOA) Estimation

NTU, Taiwan

Group of Electromagnetic Applications (Prof. Jean-Fu Kiang)

Feb. 2017 - Mar. 2019

- **Antenna Uncertainty:** Utilized special matrix structure with Khatri-Rao subspace-based MULTiple Signal Classification (MUSIC) to improve immunity to uncertainties and detect DOAs with sensors half the number of sources
- **More Sources Than Sensors:** Proposed a new antenna array structure to increase the number of detectable sources based on fourth-order statistics and compressive sensing approach
- **Mixed Carrier Frequency (CF) Known and Unknown Sources:** Proposed a two-step algorithm to first estimate DOA of CF-known sources and then joint estimate the DOA and CF of CF-unknown sources
